

ABSTRACT OF THE DISCLOSURE

There is provided a hair styling tool suitable for styling hair. The hair styling tool has a handle portion with a pair of pivotally connected arms. The hair styling tool also has a hair engaging portion with one or more hair contacting elements. The hair contacting elements provide a hair styling effect. Hair contacting elements have apertures and/or perforated grooves disposed therein. The hair contacting elements can be removably connected to the styling tool to selectively accomplish various hair styling techniques and/or effects in an efficient and versatile manner to reduce the duration and/or degree to which hair is exposed to styling damage.
